Overview

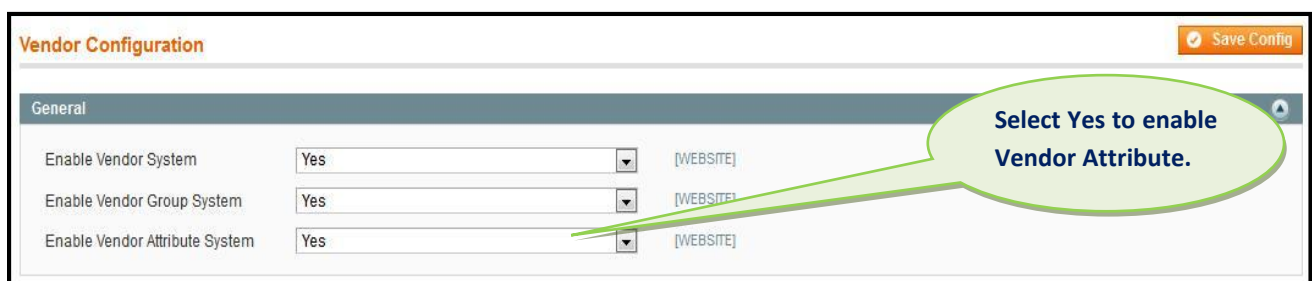

The CedCommerce Vendor Attribute Addon extension is basically an admin panel extension and provides a facility to extract important information from the vendor about his/her profile as per website admin's requirements.

The Vendor Attributes are specifically used to provide the website admin a feature with which various details can be dragged out from the vendor. These details may include Pan Card Number, some Legal Information or any other information necessary for the website admin to have.

This extension is dependent on the CedCommerce Marketplace extension and thus, CedCommerce Marketplace should be installed prior to Vendor Attributes extension to ensure proper working of Vendor Attribute extension.

Enable/Disable Vendor Attribute

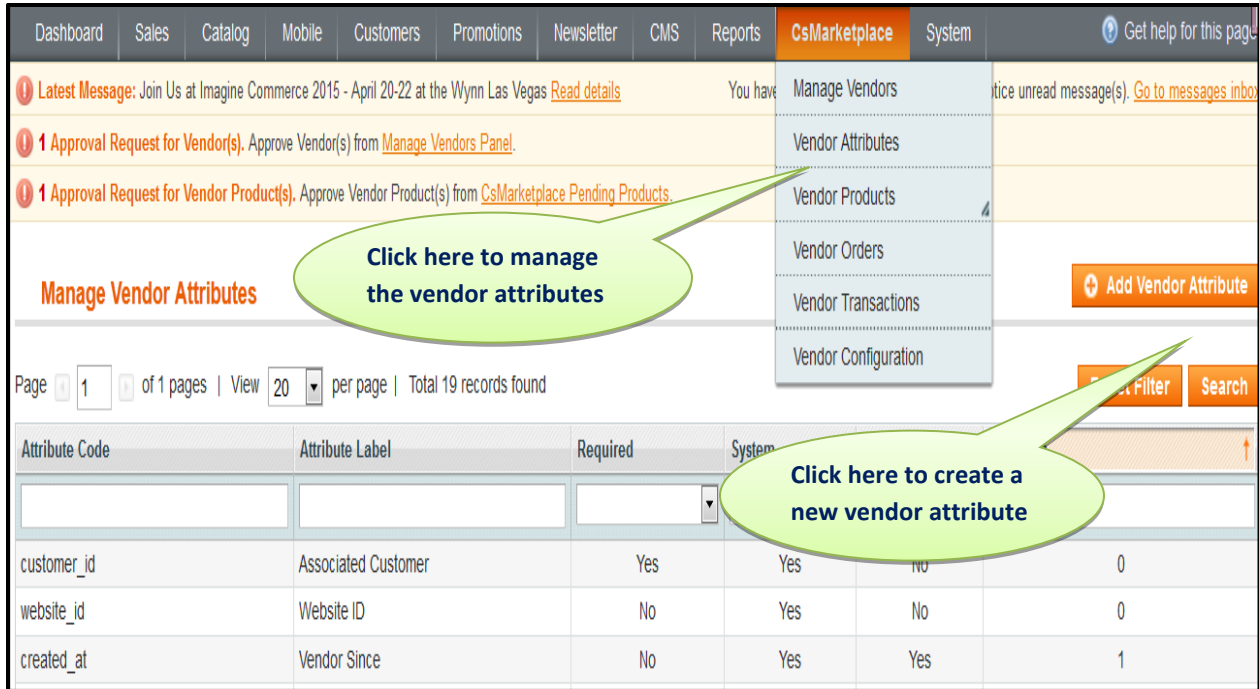

To enable the Vendor Attribute Addon, just select "Yes" in the "Enable Vendor Attribute System" dropdown and click on "Save Config" button to save the system configuration settings. Selecting "No" will disable the Vendor Attribute Addon and its features won't show up on frontend.

Vendor Configuration		Save Config
General		
Enable Vendor System	Yes	[WEBSITE]
Enable Vendor Group System	Yes	[WEBSITE]
Enable Vendor Attribute System	Yes	[WEBSITE]

Manage Vendor Attributes

From the admin panel go to the menu and select CsMarketplace > Vendor Attributes. From here admin can edit new attribute's information as well as he/she can create a new vendor attributes. The already created vendor attributes are the system attributes that can't be deleted.

customer_id	Associated Customer	Yes	Yes	No		0
website_id	Website ID	No	Yes	No		0
created_at	Vendor Since	No	Yes	Yes		1

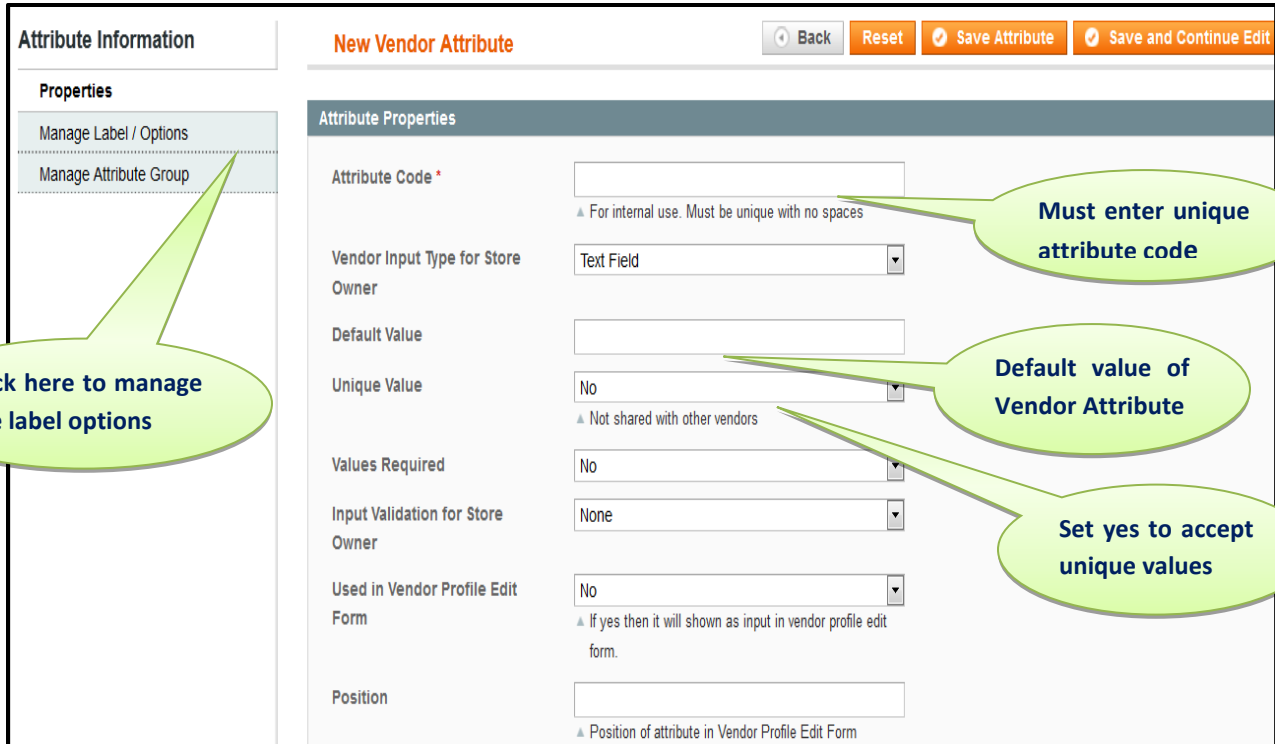

Click here to create a new vendor attribute

Add Vendor Attribute

Admin can create new vendor attribute by clicking on **“Add Vendor Attribute”** button.

a) Properties Tab

It shows all the settings to manage the new attribute information.

Attribute Code - Vendor attribute code must be unique. It cannot be updated later.

Input type - The type of the vendor attribute can be set as text/dropdown/multiselect/textarea. It cannot be updated later.

Default Value - Some default value can be provided here so that, in case no option value has been provided then this value can be used.

Unique Value - If set to yes, it won't allow duplicate values to be entered.

Value Required - If set to yes, it will become required field.

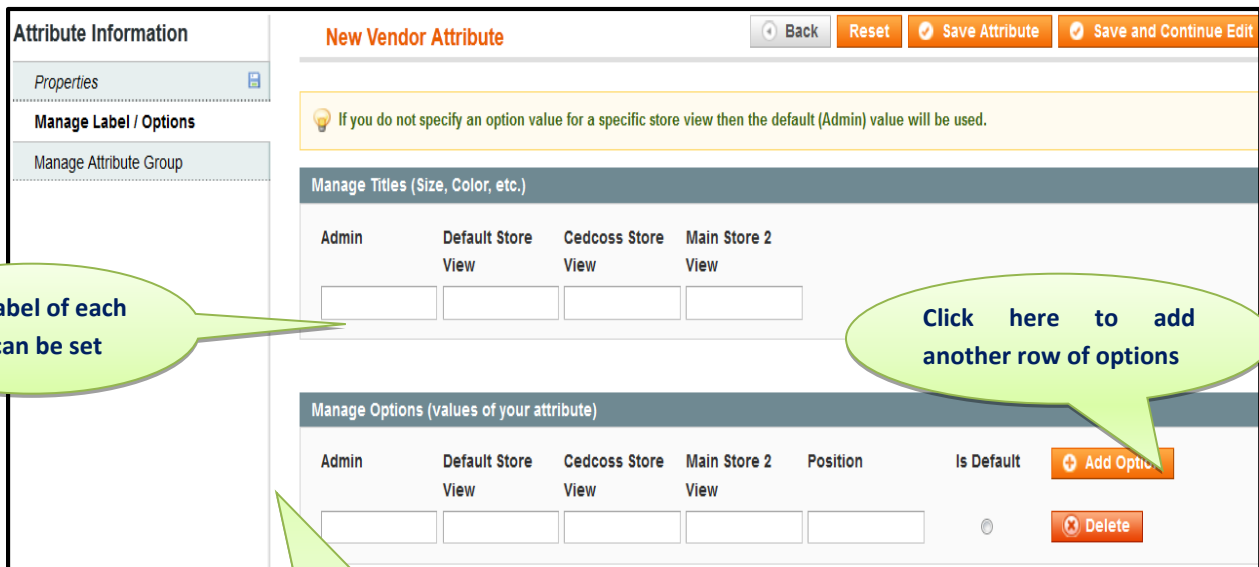

Validation for Store Owner - This is used to provide validations to the attribute value being entered, for example, it can be only numbers or characters, etc.

Used in Vendor Profile Edit Form - If set to yes, it will appear in the Vendor Profile Page at Frontend.

Position - This is used to set some sort order i.e. the position where it should be shown.

b) Manage Label/Options

Admin can add the label for this attribute by clicking on “**Manage Label/Options**”. If the attribute is of dropdown type or multi-select type then there will be a provision to add various options for that attribute.

The screenshot shows the 'New Vendor Attribute' page. On the left is a sidebar with 'Attribute Information' and 'Manage Label / Options' selected. The main content area has a title 'New Vendor Attribute' and buttons for 'Back', 'Reset', 'Save Attribute', and 'Save and Continue Edit'. A yellow tip box states: 'If you do not specify an option value for a specific store view then the default (Admin) value will be used.' Below this are two sections: 'Manage Titles (Size, Color, etc.)' and 'Manage Options (values of your attribute)'. The 'Manage Titles' section has a table with columns for 'Admin', 'Default Store View', 'Cedcoss Store View', and 'Main Store 2 View', each with an input field. The 'Manage Options' section has a table with columns for 'Admin', 'Default Store View', 'Cedcoss Store View', 'Main Store 2 View', 'Position', and 'Is Default', with 'Add Option' and 'Delete' buttons. Three callouts provide instructions: one points to the 'Admin' input in the titles table, another points to the 'Add Option' button, and a larger one points to the 'Manage Options' table.

Here label of each store can be set

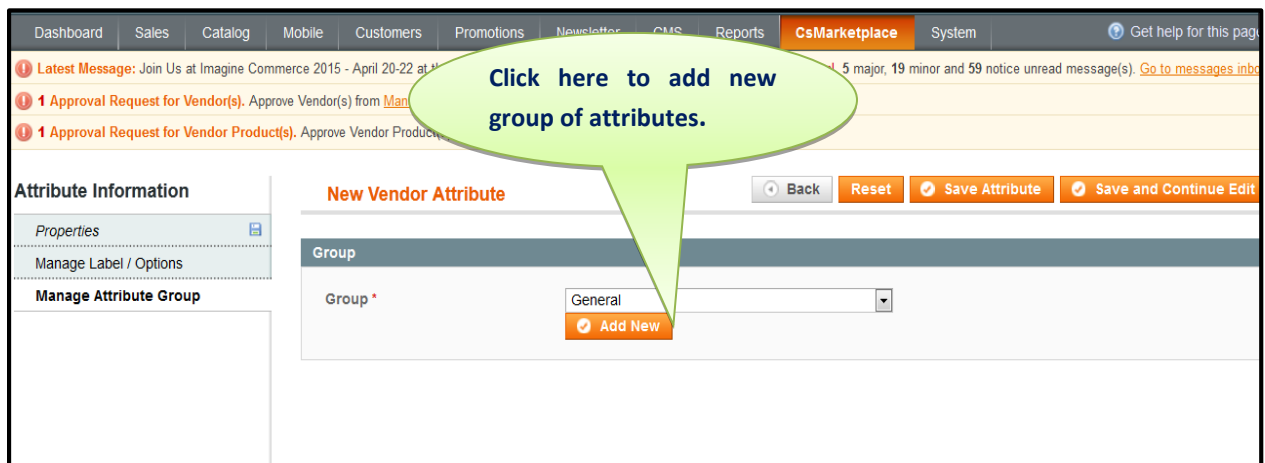

Click here to add another row of options

Here options for the dropdown and multi select can be set. In case of text field, textarea or date field, the Manage Options section doesn't appear as it has to be filled by the vendor

c) Manage Attribute Group

If some attributes have to be grouped in such a manner that they should belong only to that particular group then, Manage Attribute Group can be used. Groups are used to categorize the attributes. The attributes belonging to any group will be listed only in that particular group on the Vendor Profile page, both at frontend and admin panel.

By Clicking on the save button all the attribute data will be saved and a new attribute will be created in the Magento.

The frontend view of the Vendor Panel will look as shown below, after the Vendor Attributes have been added and group has been created.
